

Wheelly

A filter wheel with a wink

The symbol comes from the plan view of a motorised telescope filter wheel: the disc, the motor arm wrapping around it, and the aperture, which becomes the eye. The line weight is even and hand-drawn, with rounded terminals.

Clear space

Keep free space around the logo equal to the diameter of the aperture (the eye). No text, image or frame enters that area.

Minimum size

Horizontal lockup: 30 mm / 120 px wide.

Symbol only: 16 mm / 64 px.

VERSIONS

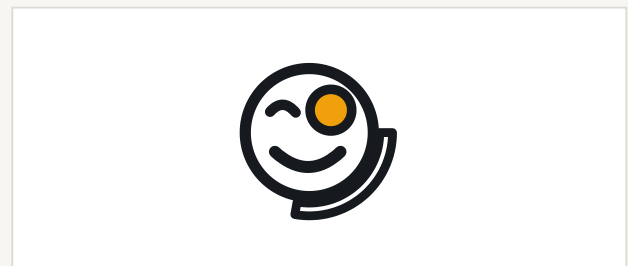

Horizontal — primary use

Horizontal reversed — dark backgrounds

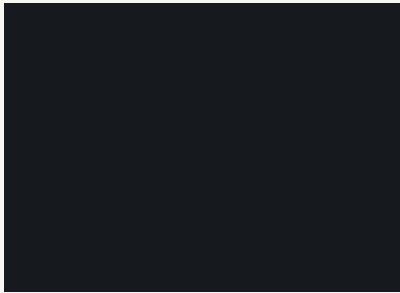

Vertical — tight spaces, social

Symbol — avatar, favicon, app icon

What not to do

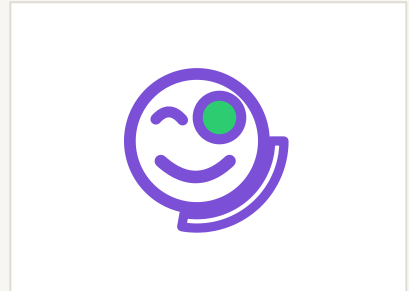

The mark is always used as supplied. If a background makes it hard to read, switch to the reversed version rather than altering the artwork. The wordmark is never used on its own: it always travels with the symbol.

Do not rotate or tilt the mark.

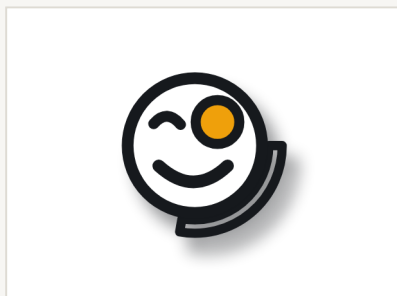

Do not stretch or squash it.

Do not recolour the linework or the eye.

Do not place the mark on low-contrast backgrounds.

Do not add shadows, glows or outlines.

Do not set the name in another typeface.
